

Part 1: Debug Test:

https://d13p2xj50zkyqm.cloudfront.net/promos_4/test/javascriptTest.html

The link above has a few javascript errors in it. Please go through and see if you can identify the errors.

Part 2: i-HTML Build:

The goals of this exercise are:

1. Replicate the mock up
2. Make it responsive / mobile friendly
3. Bonus: If you have the time please feel free to add in any creative functionality.

Here is the mock up:

- https://d13p2xj50zkyqm.cloudfront.net/promos/health/GLN/masterswitch_chocolateRL_ihtml_0317/GLN_BerbinexChocolateRL_TestMockup.jpg

Here is a document with build assets:

- <https://docs.google.com/document/d/1rjCiT-ek7mWno3vSYX2RqyDyTMZ1iRW8LslOPI5cMlw/edit?usp=sharing>

Here is a document with the copy:

- https://docs.google.com/document/d/1eJF7JKeHxiYLxc44wQAd8Zp_Dn_L28HF7dYdrBL-BsU/edit?usp=sharing

The mockup is a shortened version of a promotion we ran for our health franchise. The copy won't make sense as is. Please note in this exercise we are looking to identify technical areas for training. So, if we're successful, we'll have a foundation from which to identify the skills that we should hone together should we decide to move forward.

Speaking of foundation, if you are comfortable using a framework like foundation, bootstrap or skeleton please feel free to do so. We here at Agora Financial use [foundation](#) so if you'd like to give that a try [here](#) is some brief documentation I wrote about how to use foundation.
